Control 4 DVI, USB computers with one peripheral set using USB dynamic device pairing to prevent time-activating. SV431DVIUDDM 4 ports USB DVI KVM switch allows you to operate 4 DVI, USB-equipped computers using a single peripheral set of high definition ... Show more Make sure that the video and USB cables are connected between each computer and the KVM switch Safely turn off all computers. Disconnect everything from the KVM switch and connect one computer at a time by changing previously used input (for example, a computer connected to PC2 now connects to PC1). Turn on each computer and confirm the features before connecting the other to the KVM switch. If you're using a KVM switch that supports multiple screens, make sure that all video connections from your computer are from a video card or motherboard, both cannot be used simultaneously on most systems. 1 2 3 4 5 6 7 8 9 10 Make sure that the video and USB cables are connected between each computer and the KVM switch Safely turn off all computers.
